Summary

Full Stack Developer with 2+ years of experience in Banking and Fintech applications. Proficient in designing scalable microservices, RESTful APIs, and secure transaction systems using Python, Django, and DRF. Experienced in building high-performance Angular 17+ applications with strong focus on performance, security, and user experience. Hands-on experience working in production environments and handling live financial systems.

Technical Skills

- Frontend: Angular 17+, TypeScript, JavaScript, HTML5, SCSS
- Backend: Python, Django, Django REST Framework (DRF), REST APIs, Microservices Architecture
- Database: Oracle, MySQL, Django ORM, Query Optimization
- Tools & Libraries: Pandas, Git, Postman, Excel
- Domain Expertise: Banking, Fintech, Payment Systems, Encryption & Security

Experience

Junior Software Developer | VSOLV Solution for Business | March 2024 – Present

Roles & Responsibilities

- Designed and built scalable RESTful APIs for Loan Management and Accounts Payable systems handling high-volume transactions.
- Built dynamic and responsive Angular 17+ applications improving UI performance and user interaction.
- Implemented end-to-end financial workflows including Payment Hold/Release (Tax, Retention, Payable) to improve processing efficiency.
- Optimized complex database queries using Django ORM, improving system performance.
- Engineered backend modules for financial data processing, validation, and transaction handling.
- Performed Excel-based data comparison and amount tally for financial reconciliation processes.

Key Projects

Expense Claim & Accounts Payable System: Developed a secure financial management platform with multi-level approval workflows and payment integrations including NEFT, DD, and TDS. Added audit tracking, validation mechanisms, and role-based access control to ensure transaction accuracy and compliance.

Loan Origination System: Built modules for loan eligibility validation, pricing configuration, and workflow automation. Integrated REST APIs for customer data handling and loan processing operations.

PPR (Budget Management System): Created a workflow-driven budgeting solution with multi-level approval hierarchies, budget allocation tracking, and approval management features.

Journal Voucher System: Automated reconciliation, validation, and ledger posting workflows to reduce manual processing and improve data consistency.

Education

B.E. Computer Science and Engineering | CGPA: 8.31 | GRT Institute of Engineering and Technology | 2023

Certificate

Google Data Analytics Professional Certificate
